

# SWIMPLEX LANE ROPES

By utilising developments in wave breaking design, SWIMPLEX Lane Ropes have exceptional wave quelling characteristics. With an exclusive inter-locking disc design incorporating 'blanket friendly' rounded edges.

The discs and floats are manufactured from UV stabilised polypropylene to maximise longevity in the harsh commercial swimming pool environment.

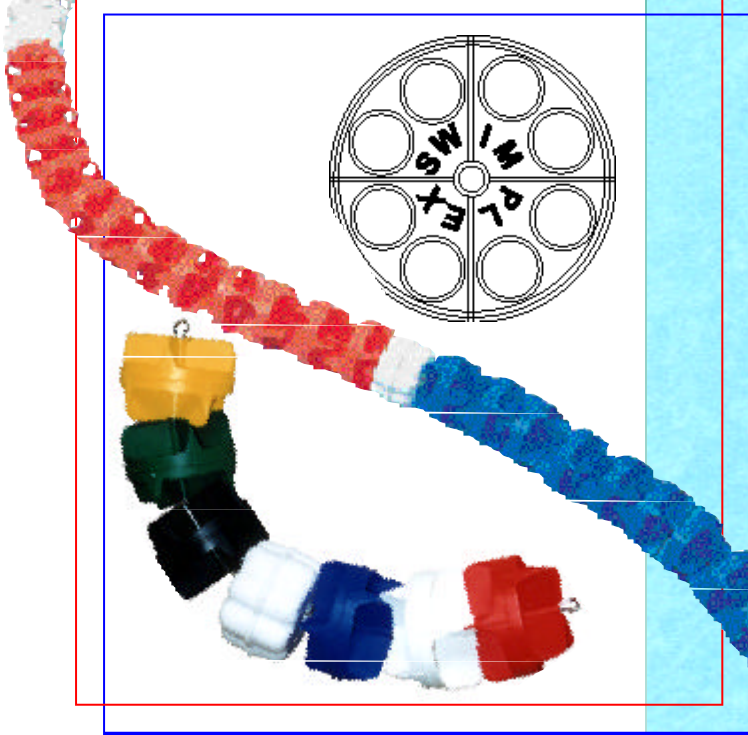

A storage reel is available in mirror finished stainless steel. Quality fittings may be purchased separately, including tensioners, heavy duty stainless steel cable & 'S' hooks.

SWIMPLEX Lane Ropes are now accepted both in Australia and overseas. The standard colour range is White, Red, Blue, Yellow, Green and Black. Special colour selections are also available.

Our TENSIONER has been designed with the pool user and operator in mind. There are no sharp parts protruding and the tensioner has a solid stainless steel internal section which is covered by a polypropylene handle with ribs for extra grip and comfort. To attach the wire, the handle is simply forced along the stainless steel centre which allows access to the clamp. When attached, the handle is repositioned to hide the clamp and wire end.
